1. Write a program `movie_rating.py` that asks the user to input a rating (1-5 stars) for your favorite movie. Print the difference between the user's rating and yours. You should store your movie rating in a different variable from the rating that the user inputs.

2. Create a program `grandiose.py` that asks the user to enter an adjective that is a synonym for *faster*. Use the adjective they input when you respond that your laptop is <u>so</u> much faster than theirs, you are surprised that their laptop can... (fill in the blank).
